

Update: 4/21/08 I've been forced to turn off the image display in the module, because other "customized" avatars are not being shrunk down. Not as pretty in my layout, and I don't feel like messing with the code, so I'll be on the lookout for other module solutions. Free (software) is as free (software) does. ☹

Update: 4/3/09 I noticed last night, that the 2.0 extension is **still glitching**, presenting certain images non-thumbnailed (doesn't seem to matter if they are giif, jpeg or png). The software might need an adjustment to the php? No idea right now. I suspect it has something to do with Tweets who upload large "custom" images. Hmmmm.

Original Post 4/01/09

The screenshot displays a Joomla website interface. On the left sidebar, there is a 'facebook' widget with a profile picture of Eduardo Eusebio, a 'LinkedIn' widget with a 'View my profile on LinkedIn' button, and a 'Bookmarking & Sharing Tools' section with buttons for 'SHARE', 'Friend', and 'M...'. Below these is a large 'VYATTA Open Networking OPEN SOURCE Cisco ALTERNATIVE' advertisement. The main content area features a 'twitter' widget with two tweets. The first tweet is from 'http://edeusebio.com' (36 minutes ago) about a CapitolOne ad. The second tweet is from 'http://edusebio.com' (43 minutes ago) about Joomla! extension 'module_tweets 2.0'. A yellow arrow points from the Joomla! tweet to the 'Ed's TweetStream' widget on the right. Below the tweets is a section for 'Christian Eusebio's music video of Beck's Lost Cause', including the title, author 'Ed Eusebio', date 'Wednesday, 18 March 2009 13:12', and a video player. To the right of the video is a 'Digg' widget with a 'submit' button. The 'Ed's TweetStream' widget on the right contains several tweets from users like Gray Rinehart, Warren Whitlock, IZEA, Ron S. Doyle, and Perez Hilton. At the bottom of the page, there is a large, distorted, and illegible text overlay.
